

8과 칫솔하고 치약을 삽니다

Chapter 8 — I buy a toothbrush and toothpaste

This chapter at a glance

주제	Topic 쇼핑 — shopping
어휘와 문법	Vocabulary & grammar 단위, 가격 / 명하고 명 / 동형-습니다, -습니까? — counters and prices · joining two nouns · the formal polite ending
활동	Activities 물건 사기, 쇼핑 전단지 읽기 — buying things; reading a sale leaflet
문화와 정보	Culture & information 한국의 화폐 — Korean money

The title ends in 삽니다, not 사요. That is the new ending of this chapter: the same meaning as 사요 but a formal register, used in announcements, in writing, and by shop staff to customers. From here on you will meet both, and part of learning Korean is knowing which room you are in.

Counting is the real work of this chapter. Korean cannot say "two coffees" — it needs a counter word between the number and the noun, and which counter you use depends on what kind of thing it is. 커피 두 잔, 사진 두 장, 강아지 두 마리. English has this only for uncountables ("two cups of coffee"); Korean does it for everything.

도입

Warm-up

여기가 어디예요?

Where is this?

무엇이 있어요?

What is there?

The page shows three shop interiors: a warehouse-style aisle stacked with nappies, kitchen roll and toilet paper; a shelf of shampoos, toothbrushes and toiletries; and a supermarket aisle of packaged food. All three are the kind of 마트 this chapter shops in — the everyday household goods, not clothes or electronics.

여기가 어디예요? takes 가, where chapter 7's warm-up had 여기는 어디예요? with 는. Both are correct. 가 simply asks the question; 는 sets 여기 up as a topic, often implying a contrast with somewhere else. At this stage treat them as interchangeable, but notice the book alternates deliberately.

무엇이 있어요? is the pattern for "what is there", and the answer takes the same 있어요: 첫솔이 있어요. Korean has no verb "to have" separate from "to exist" — 있다 covers both, and which one it means comes from the sentence around it.

어휘와 문법 1

Vocabulary & grammar 1

사람과 물건의 수를 세는 말을 알아보세요.

Learn the words used for counting people and things.

The page is one drawing of a café. Each counter word is labelled with an arrow pointing at what it counts: 대 at a laptop, 잔 at a cup of coffee, 장 at photographs on the table, 권 at magazines in a rack, 마리 at a puppy in a carrier, 명 at a customer, 개 at bananas, 조각 at a slice of cake, 병 at bottles in the chiller.

단위 — Counters, and what each one counts

명	people 학생 다섯 명 · the polite version is 분
개	things in general The fallback counter. If you do not know the right one, use 개
마리	animals 강아지 한 마리 · 닭 한 마리
대	machines and vehicles 노트북 한 대 · 자동차 두 대
권	books and magazines 잡지 세 권
장	flat, thin things 사진 두 장 · paper, tickets, cards
잔	cups and glasses of something 커피 한 잔 · 녹차 세 잔
병	bottles of something 주스 한 병
조각	slices, pieces 케이크 한 조각

The word order is fixed and it is not the English one: noun, then number, then counter. 학생 다섯 명 — student, five, person-counter. Say 다섯 학생 and it is wrong. Build the phrase in that order every time and it becomes automatic.

Counters take the native numbers from chapter 6, which means the five shape-changers come back: 한, 두, 세, 네, 스무. It is 커피 한 잔, never 하나 잔. This is the same rule you met in 한 시 — a counter is a counter, whether it counts hours or coffees.

잔 and 병 count the container, not the drink, so they work like English "a cup of" and "a bottle of". 개 is the one to fall back on: it will sound slightly childish for a laptop, but you will be understood, and that is worth more than silence while you hunt for 대.

무엇이 얼마나 많이 있어요? 이야기해 보세요.

How many of each thing is there? Talk about it.

Count these, choosing the right counter

사람

person → 명

케이크

cake → 조각

사진

photo → 장

물

water → 병

강아지

puppy → 마리

노트북

laptop → 대

커피

coffee → 잔

잡지

magazine → 권

가 학생이 몇 명 있어요?

How many students are there?

나 학생이 다섯 명 있어요.

There are five students.

몇 means "how many" and sits directly in front of the counter: 몇 명, 몇 개, 몇 병. You met it already in 몇 시 — same word, same position. To ask any counting question, take the statement and swap the number for 몇.

명하고 명

Noun + 하고 + Noun — "and"

사람이나 물건을 나열할 때 사용해요.

Used to list people or things.

가 주문하세요.
Please order.

나 커피하고 케이크 주세요.
A coffee and a cake, please.

예문 — Examples

가 주스 한 병하고 녹차 세 잔 주세요.
One bottle of juice and three cups of green tea, please.

나 네, 잠시만 기다려 주세요.
Certainly, one moment please.

냉장고에 과일하고 채소가 있어요.

There is fruit and there are vegetables in the fridge.

하고 — joins the two nouns directly

빵, 우유 → 빵하고 우유
bread and milk

커피, 케이크 → 커피하고 케이크
coffee and cake

하고 attaches to the end of the first noun with no space, and nothing goes after the second: 빵하고 우유. There is no 받침 rule here — it is the same syllable after a vowel or a consonant, which makes it the easiest of Korean's several words for "and".

This 하고 joins nouns only. It cannot join two sentences — "I ate and then I left" needs a different construction entirely. Whenever you want "and" in Korean, first ask yourself: am I joining two things, or two events?

When a counted phrase is joined, the 하고 goes on the very end of the whole phrase, after the counter: 주스 한 병하고 녹차 세 잔. Not 주스하고 한 병. The number and counter belong to their noun and travel with it.

You will also meet 와/과 for "and" — the written and formal equivalent, as in 술가락과 젓가락 from chapter 7. 하고 is what you say; 와/과 is what you read. 랑/이랑 is a third, more casual again. All three mean the same thing.

연습 1 — 무엇을 몇 개 사요? 이야기해 보세요.

가 무엇을 사요?
What are you buying?

나 콜라 한 병하고 라면 두 개를 사요.
I'm buying one bottle of cola and two packs of ramyeon.

보기) 콜라, 라면
cola, ramyeon

1) 사과, 배
apples, pears — three apples and two pears in the picture

2) 주스, 케이크
juice, cake — four bottles and two slices

3) 공책, 가위

notebooks, scissors — two notebooks and one pair of scissors

Watch which counter each one needs: 사과 세 개, 배 두 개, 주스 네 병, 케이크 두 조각, 공책 두 권, 가위 한 개. The fruit takes 개 because it is just an object; the juice takes 병 because it is in bottles.

연습 2 — 여러분은 마트에서 무엇을 사고 싶어요? 이야기해 보세요.

This exercise reuses 사고 싶어요 from chapter 7, now with counters attached: 저는 라면 세 개하고 우유 한 병을 사고 싶어요. The two chapters are designed to stack, and this sentence is the point where they do.

어휘와 문법 2

Vocabulary & grammar 2

가격을 어떻게 말해요?

How do you say a price?

The place-value table as the page prints it

천만 ten million	백만 million	십만 hundred thousand
만 ten thousand	천 thousand	백 hundred
십 ten	일 one	

The four worked examples

4,659 — 사천육백오십구 원

4,659 won

1,734,659 — 백칠십삼만 사천육백오십구 원

1,734,659 won

734,659 — 칠십삼만 사천육백오십구 원

734,659 won

21,734,659 — 이천백칠십삼만 사천육백오십구 원

21,734,659 won

This table is the single most useful thing in the chapter, and it is worth slowing down for. Korean does not group digits in threes the way the comma suggests — it groups in fours, around 만 (10,000). Cover the comma and mentally split 734,659 as 73|4659: 칠십삼만, then 사천육백오십구. The written comma and the spoken break are in different places, and that mismatch is what makes Korean prices hard.

Above 만 the names are built by multiplying it: 십만 is ten 만 (100,000), 백만 is a hundred 만 (1,000,000), 천만 is a thousand 만 (10,000,000). So there is no separate word for "million" to learn — just 만 with a multiplier in front.

Prices always take Sino-Korean numbers — 일, 이, 삼 — never the native set. This is the other half of the split you learned in chapter 6: native numbers count things, Sino numbers give money, dates and phone numbers. Counters and prices sit side by side on this spread precisely so you feel the difference.

가 얼마예요?

How much is it?

나 사천육백오십구만 원이에요.

It's 46,590,000 won.

Read that answer carefully — it is not 4,659원. 사천육백오십구 is followed by 만, so the whole of 4,659 is multiplied by ten thousand: 46,590,000. The 만 at the end of a long number is doing enormous work, and missing it puts you out by four decimal places.

다음 물건들은 얼마예요? 이야기해 보세요.

How much are these things? Talk about them.

The price tags in the electronics shop

냉장고 1,290,000원

fridge — 백이십구만 원

텔레비전 529,000원

television — 오십이만 구천 원

세탁기 325,570원

washing machine — 삼십이만 오천오백칠십 원

청소기 118,900원

vacuum cleaner — 십일만 팔천구백 원

컴퓨터 755,780원

desktop computer — 칠십오만 오천칠백팔십 원

노트북 442,000원

laptop — 사십사만 이천 원

A phone is also on the counter in the picture with its own tag, but the print is too small to read on the scan, so it is left out here rather than guessed at.

가 텔레비전이 얼마예요?

How much is the television?

나 텔레비전이 오십이만 구천 원이에요.

The television is 529,000 won.

Work 529,000 through the four-digit rule: split it 52|9000, so 오십이만 then 구천. Notice nobody says 오백이십구천. Practise by reading every tag above out loud — that is exactly what the exercise is for.

동형-습니다, -습니까?

Verb/adjective + -습니다, -습니까? — the formal polite ending

격식적인 상황에서 정중하게 설명하거나 질문할 때 사용해요.

Used to explain or ask politely in a formal situation.

가 이 텔레비전이 얼마입니까?
How much is this television?

나 팔십이만 원입니다.
It is 820,000 won.

예문 — Examples

가 어느 컴퓨터가 좋습니까?
Which computer is good?

나 이 컴퓨터가 좋습니다. 그리고 싸입니다.
This computer is good. And it is cheap.

이 노트북이 큼니다. 그리고 가볍습니다.
This laptop is big. And it is light.

-습니다, -습니까? — after a final consonant (받침)

먹다 → 먹습니다, 먹습니까? **맛있다 → 맛있습니니다, 맛있습니까?**
eats / does he eat? is tasty / is it tasty?

-ㅂ니다, -ㅂ니까? — after a vowel

사다 → 삽니다, 삽니까? **비싸다 → 비쌉니다, 비쌉니까?** **★ 살다 → 삽니다, 삽니까?**
buys / does he buy? is expensive / is it expensive? lives / does he live? — irregular

★ 팔다 → 팝니다, 팝니까?
sells / does he sell? — irregular

Tip

명입니다, 명입니까?
책 → 책입니다, 책입니까? · 시계 → 시계입니다, 시계입니까?

This is the 합쇼체, the formal polite style. It says exactly what -아/어요 says; the difference is the room you are in. News readers, soldiers, shop staff addressing customers, and anyone making a presentation use it. Between friends it would sound stiff and strange.

The 받침 rule again, and it works the same way as -으세요: consonant at the end of the stem takes the full -습니다, vowel takes the shortened -ㅂ니다, which is written into the syllable rather than added after it. 사다 → 사 + ㅂ = 삽니다.

The starred verbs are the ㄹ-irregulars: a stem-final ㄹ simply drops before ㄴ, ㅂ and ㅅ. 살다 → 삽니다, 팔다 → 팝니다. Which produces a trap worth noting — 삽니다 is both "buys" (from 사다) and "lives" (from 살다), and only context separates them.

Despite the spelling, ㅂ니다 is pronounced [ㅁ니다]: 삽니다 is [삼니다], 좋습니다 is [조습니다]. The ㅂ assimilates to the following ㄴ. Every single one of these forms works this way, so learn the sound once and it applies everywhere.

The Tip covers nouns: 이다 becomes 입니다, and the question 입니까? So 얼마예요? in this register is 얼마입니까?,

and 책이에요 is 책입니다. It attaches to the noun regardless of 받침 — no rule to check.

연습 1 — 다음 물건에 대해 이야기해 보세요.

가 이 청소기가 좋습니까? 얼마입니까?
Is this vacuum cleaner good? How much is it?

나 네, 좋습니다. 이십일만 삼천 원입니다.
Yes, it is good. It is 213,000 won.

보기) 청소기 — 좋다? O · 얼마? 213,000원
vacuum cleaner — good? yes · 이십일만 삼천 원

2) 휴대 전화 — 비싸다? X · 얼마? 150,000원
mobile phone — expensive? no · 십오만 원

1) 컴퓨터 — 빠르다? O · 얼마? 798,500원
computer — fast? yes · 칠십구만 팔천오백 원

3) 노트북 — 무겁다? X · 얼마? 1,239,000원
laptop — heavy? no · 백이십삼만 구천 원

For the X answers, negate with 안: 아니요, 안 비쌉니다. The 안 goes in front of the verb exactly as it did in chapter 6, and the formal ending changes nothing about where it sits.

연습 2 — 여러분은 마트에서 무엇을 삽니까? 얼마입니까? 이야기해 보세요.

말하기와 듣기

Speaking & listening

라흐만 씨가 직원에게 물어보고 있어요. 다음과 같이 이야기해 보세요.

Rahman is asking a shop assistant. Practise the conversation below.

라흐만 칫솔이 어디에 있어요?

Where are the toothbrushes?

직원 저기에 있습니다.

They are over there.

라흐만 이 칫솔은 얼마예요?

How much is this toothbrush?

직원 다섯 개에 5,000원입니다.

Five for 5,000 won.

라흐만 그럼 이거하고 봉투 하나 주세요.

Then I'll take this and a bag, please.

Swap in these pairs

1) 칫솔 | 다섯 개, 5,000원

toothbrushes | five for 5,000 won

2) 컵라면 | 일곱 개, 7,350원

cup noodles | seven for 7,350 won

Notice who uses which ending. Rahman, the customer, speaks in 있어요 and 얼마예요; the shop assistant answers in 있습니다 and 원입니다. That asymmetry is real and you will hear it in every Korean shop — staff go formal, customers do not have to.

다섯 개에 5,000원 uses 에 for a rate: "at five for 5,000". This is the same particle you know for time and place, here meaning "per". 한 마리에 얼마예요? — how much for one? It is the standard way to ask a unit price.

이거 is the spoken form of 이것, "this thing", and it is what you say while pointing. 봉투 is the carrier bag — worth knowing that in Korea it is usually charged for, so 봉투 하나 주세요 is a real purchase, not a courtesy.

연습 2 — 친구와 물건을 사는 대화를 해 보세요.

가 ○이/가 얼마예요?

How much is ○?

나 ○개에 ○원이에요.

It's ○ won for ○ of them.

The ○이/가 in the template is a reminder to choose: 이 after a consonant, 가 after a vowel. 칫솔이, but 커피가. The book leaves both in so you have to make the choice yourself.

듣기 — 마트에서 후엔 씨가 직원과 이야기해요. 잘 듣고 답해 보세요.

1) 닭 한 마리에 얼마예요?

How much is one chicken?

2) 후엔 씨가 산 것을 골라 보세요.

Choose what Huyen bought.

① 닭 한 마리, 계란 한 판

one chicken and one tray of eggs

② 닭 두 마리, 계란 두 판

two chickens and two trays of eggs

③ 닭 두 마리, 계란 한 판

two chickens and one tray of eggs

The three options differ only in the numbers, so this is a counting test disguised as a listening one. Listen for 한 and 두 in front of 마리 and for how many trays of eggs — everything else in the recording is the same.

단어장 — New words**봉투**

carrier bag, envelope

닭

chicken, the live bird

닭고기

chicken, the meat

계란

egg

닭 and 닭고기 are not interchangeable. 닭 is the animal and what you buy whole at the counter — 닭 한 마리. 닭고기 is the meat as food — 닭고기를 좋아해요. Korean marks this distinction for every animal by adding 고기: 소 and 소고기, 돼지 and 돼지고기.

Read the text and answer the questions.

이번 주 할인 상품 — This week's discounted goods

칫솔 5개 — 8,000원 → 6,600원

5 toothbrushes, was 8,000, now 6,600

샴푸 — 12,000원 → 9,600원

shampoo, three bottles, was 12,000, now 9,600

치약 120g X 3개 — 6,000원 → 4,800원

toothpaste, 120 g × 3, was 6,000, now 4,800

휴지 — 12,900원 → 10,320원

toilet paper, was 12,900, now 10,320

할인은 a discount and 상품은 goods for sale, so 할인 상품 is the sale items. On a real leaflet the old price is struck through and the new one printed in red, exactly as here — the arrow does the work of the word "now".

Three of the four are exactly 20 percent off: 6,000 → 4,800, 12,000 → 9,600, 12,900 → 10,320. Only the toothbrushes break the pattern at 8,000 → 6,600. Checking a leaflet's arithmetic like this is good number practice, and the phrase you would see on the sign is 20% 할인, read 이십 퍼센트 할인.

1) 맞으면 ○, 틀리면 X 하세요. — Mark ○ if correct, X if wrong

① 샴푸는 세 병에 9,900원입니다.

Shampoo is 9,900 won for three bottles.

② 치약은 할인을 합니다.

The toothpaste is discounted.

③ 휴지는 12,900원입니다.

The toilet paper is 12,900 won.

Two of the three are traps, and they work the same way. ① says 9,900 where the leaflet says 9,600, and ③ quotes 12,900 — the struck-through price, not the 10,320 you would actually pay. Whenever a question hands you a number, check it against the arrow before you answer. Only ② is ○.

2) 여러분은 어디에서 쇼핑을 합니까? 써 보세요.

1) 어디에서 쇼핑을 합니까?

Where do you shop?

2) 무엇을 삽니까?

What do you buy?

3) 그것은 얼마입니까?

How much is it?

4) 모두 얼마입니까?

How much is it altogether?

저는 ____에서 쇼핑을 합니다.

I shop at ____.

The whole writing task is set in -습니다, including the questions — 합니까, 삽니까, 입니까. Answer in the same register: 저는 마트에서 쇼핑을 합니다, not 해요. Matching the register you are asked in is a real skill, and this exercise is drilling it.

모두 means "all, altogether" and is the word for a total. 모두 얼마입니까? is what you ask at the till, and 모두 삼만 원입니다 is the answer you will hear.

단어장 — New words

할인

discount

상품

goods, merchandise

문화와 정보 — 한국의 화폐

Culture & information — Korean money

한국의 화폐에는 지폐와 동전이 있어요.

Korean money comes in notes and coins.

지폐는 네 가지 종류가 있어요.

There are four kinds of note.

1,000원, 5,000원, 10,000원, 50,000원이에요.

They are 1,000, 5,000, 10,000 and 50,000 won.

동전도 네 가지가 있어요.

There are four kinds of coin as well.

10원, 50원, 100원, 500원이에요.

They are 10, 50, 100 and 500 won.

그리고 현금 이외에 수표, 신용카드가 있어요.

And besides cash there are cheques and credit cards.

한국의 지폐 — The notes

천 원

1,000 won, blue — the scholar Yi Hwang

만 원

10,000 won, green — King Sejong

수표

a cheque, here made out for 1,000,000 won

오천 원

5,000 won, orange — the scholar Yi I

오만 원

50,000 won, yellow — the artist Shin Saimdang

Note the names: the 10,000 note is 만 원, not 일만 원. Korean drops the 일 in front of 만 the same way English says "a thousand" rather than "one thousand". Same for 천 원. But you do say 이만, 삼만 — the omission applies only to one.

The 오만 원 note is the newest, issued in 2009, and Shin Saimdang is the only woman on Korean currency. She is also the mother of Yi I, the scholar on the 5,000 note — mother and son on two denominations of the same currency.

수표 are cashier's cheques for large round sums, most often 100,000 won, and they circulate almost like notes: shops take them, and you sign the back. They are far less common than they were, because transfers and cards have replaced them for most of what they used to do.

In practice Korea is close to cashless. Cards are accepted almost everywhere, including for very small amounts, and refusing a card is unusual. Carry a little cash for street stalls and older markets; you will rarely need more than that.

Questions

1) 한국의 지폐는 모두 몇 가지 있어요?

How many kinds of note are there in Korea? → 네 가지 있어요

2) 한국의 동전 중에서 무엇이 가장 커요?

Which is the biggest of the Korean coins? → 500원짜리예요

3) 한국의 10,000원은 여러분 나라 돈으로 얼마예요?

How much is 10,000 won in your own country's money?

가지 is the counter for kinds or varieties — 네 가지, four kinds — and it is the counter the passage uses twice. 중에서 means "out of, among", so 동전 중에서 is "among the coins". Both are worth taking from this page.

발음 · 배운 어휘 확인

Pronunciation · Vocabulary checklist

한국의 동전 — The coins

십 원

10 won, copper

오십 원

50 won

백 원

100 won — the admiral Yi Sun-sin

오백 원

500 won — a crane

발음 1 — 다음을 듣고 따라 읽으세요.

칫솔

[칫솔]

chit-ssol

다섯 개

[다섯 개]

da-seot kkae

닭

[닥]

dak

닭고기

[닥고기]

dak-kko-gi

칫솔 and 다섯 개 are the same event twice. A ㅅ at the end of a syllable is pronounced as a plain [ㄷ] stop — hence [칫], [다섯] — and that stop then hardens the ㅅ or ㅈ that follows, giving [솔] and [깨]. One rule, two effects, and it is why the written and spoken forms look so different.

닭 is the double 받침 ㄹ from chapter 7's 읽다, seen from the other side. With nothing after it, only the first letter survives: [닥]. The ㄹ is silent — but it reappears the moment a vowel follows, as in 닭이 [달기].

닭고기 → [닥고기] adds tensification on top: the [ㄱ] of 닭 hardens the 고 into 꼬, exactly as 먹고 became [먹꼬] in chapter 7. So one short word carries both of this chapter's sound rules at once.

발음 2 — 다음을 듣고 연습해 보세요.

가

닭 한 마리에 얼마입니까?

How much for one chicken?

나

육천오백 원입니다.

6,500 won.

가

칫솔 다섯 개하고 봉투 하나 주세요.

Five toothbrushes and a bag, please.

나

네, 여기 있습니다.

Yes, here you are.

가

닭고기를 좋아해요?

Do you like chicken?

나

네, 닭고기를 자주 먹어요.

Yes, I eat chicken often.

The second exchange is the whole chapter in two lines: 칫솔 다섯 개 is a counted phrase, 하고 joins it to 봉투 하나, and 주세요 from chapter 7 closes it. If you can say this one sentence in a shop, chapter 8 has done its job.
